## SMOKING IS EVEN WORSE THAN WE THOUGHT

“A new study adds at least five diseases and 60,000 deaths a year to the toll taken by tobacco in the United States. ... In addition to the well-known hazards of lung cancer, artery disease, heart attacks, chronic lung disease and stroke, the researchers found that smoking was linked to significantly increased risks of infection, kidney disease, intestinal disease caused by inadequate blood flow, and heart and lung ailments not previously attributed to tobacco.”
